Managing UHN T-ID Passwords

What is UHN TID/ESS?

The UHN assigned T-ID account has a 90-day password expiry window. Since at TRI we are still running two separate domains – U1DOME and UHN, there is no prompt on when the T-ID account password is about to expire. For this reason, we are providing the below information to help you manage your T-ID account password.

☐ Change your T-ID account password at the same time you change the U1DOME account password to have both passwords aligned to the same expiry date.

   Helpful tip: Create a recurring appointment in your calendar to remind yourself every 80 days to reset all your passwords.

How to change the UHN TID/ESS password:

To change your T-ID account password using a TRI computer, please follow the below steps:

1. Log in to computer using your U1DOME account.
2. Once logged in, use: **Ctrl+Alt+Del** (or **Ctrl+Alt+End** when on remote PC through VPN)
3. Click on Change Password.
4. Change first line to UHN***your T-ID*** number, enter Old Password, New Password and Confirm Password, hit enter.
